Requests:

- Support all languages
- Able to integrate to Flutter App easily
- Unlimited upload documents (PDF) in knowledge base
- Affordable

Objective:
A functional custom AI chatbot that feeds on personal knowledge base in my existing flutter app

General Requirements:
1. Able to upload thousands and thousands of PDFs to third party services.
2. Use the PDF chatbot API and integrate into the existing Flutter page.
3. Create a fully functional chatbot UI with the API in the flutter page.
4. The chatbot must be able to understand different languages since my PDFs are in different languages.

Chatbot requirements:
1. UI must be clean and simple (similar to chatgpt will do)
2. Text generated by AI bot can be copied.
3. On the top bar, there should be a display of how many queries users have. (The number of queries will refresh after a month)
        a) Free users: 25 queries left
        b) Gold users: 35 queries left
        c) Legend users: 100 queries left
        d) Top users: 500 queries left

4. On the same top bar, there should be a countdown timer, reminding users when the queries will refresh.
5. Code a logic that will refresh all queories in the first day of a month. (e.g. on 1st September, all queries will be refreshed and provided with full number of queries depending on their membership)
